

Charts, diagrams and maps that make a difference – how to do it right!

Training in visual communication for environment and sustainable development

Making a chart or a diagram is not hard. But making powerful, engaging and easily understood graphics is a true challenge. With environment and development issues, our task becomes complicated by an almost infinite depth and complexity. Finding the right balance between academic correctness and oversimplification is not easy.

Learn how to make the kind of visual material that gets picked up by bloggers, are used in press releases and ends up in presentations!

In our full-day training workshop, you will learn how to create charts, diagrams and maps that capture your audience's attention and expand the reach and impact of your information.

Our workshop is designed for anyone who works with environment and sustainable development issues, from researchers to journalists.

Envalue and **Nordpil** have extensive experience in working for United Nations, international institutions, think tanks, and national governments - with training, high-profile reports and graphics products.
